

Price misalignment and exceptions work against contract savings you negotiate from the beginning. Given healthcare's complex contracting model and low contract match rates, a focused effort is needed to reduce overpayment.

Leverage strategically contracted prices

Price Sync Managed Service is the dedicated focus needed to continually drive price accuracy. GHX facilitates contract price alignment among trading partners with visibility and efficiency regardless of contract origination — GPO or local contracts.

The service begins by verifying that all contracts are loaded electronically, matched with your item master and price validated for electronic orders. Our supplier outreach process for resolution at the contract level, along with automated exception monitoring, result in industry-leading exception rates targeted at below 2.5 percent.

Improved order-to-invoice match rates can yield savings from 1-3 percent of your total spend. And, your team can focus on strategic activities.

PRICE SYNC MANAGED SERVICE
