GHX

NEXUS

Access clean and accurate item and pricing data from over 800 supplier-managed catalogues

Managing item data from multiple sources can be a time-consuming, manually intensive process that leaves healthcare providers open to order and invoice issues.
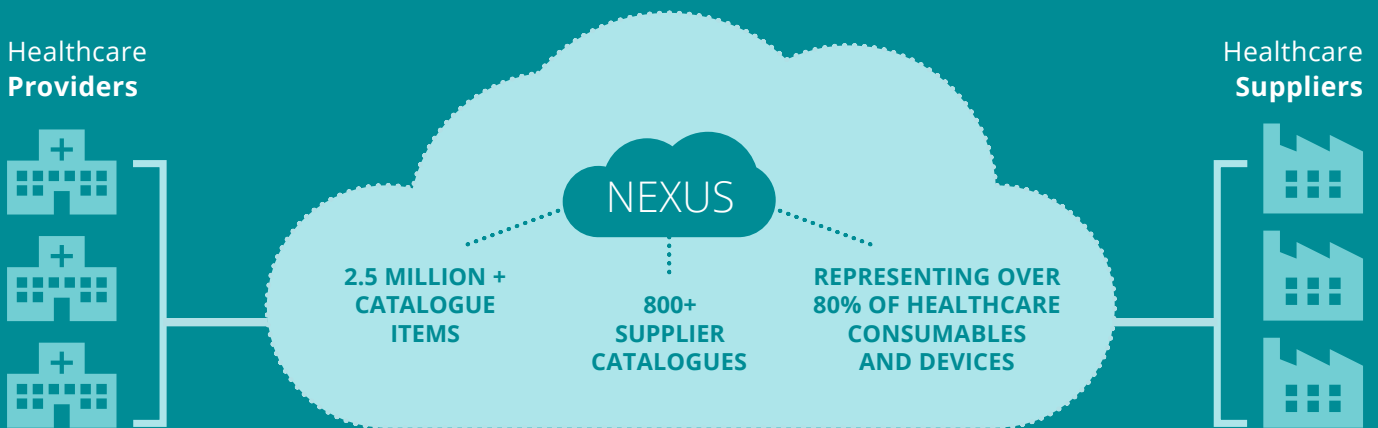

What if you could access accurate, up-to-date item and pricing data in one place, saving your staff time and reducing the risk of incorrect orders?

With over 800 supplier-managed catalogues backed up by the latest GDSN data, NEXUS from GHX is designed to give you all that and more.

More efficient item data management

Our cloud-based item data management solution hosts hundreds of catalogues from healthcare suppliers across Europe, allowing buyers to search more than 2.5 million approved catalogue items.

The web-based user interface makes it easy to find the products you need, creating a more efficient purchasing process, and you can upload your own item and contract data.

Uniting the best of healthcare™

Achieve more accurate ordering with automatic item updates

Item details, including Global Trade Item Numbers (GTINs), are maintained directly by suppliers through their systems and via the Global Data Synchronisation Network (GDSN). Automatic notifications let you know when updates are published, so your staff are working with the latest product information.

NEXUS connects with your hospital's existing ERP and inventory management system, allowing you to accept updates and publish them to the requisitioners in your organisation for more accurate ordering, improved invoice matching and better contract compliance.

KEY FEATURES AND BENEFITS

Intuitive cloud-based technology

- User-friendly interface
- Supports supplier and buyer managed content
- Cloud-based data storage

Efficient item data management

- Manage, maintain and validate item and contract data
- Upload and manage data at a more granular level
- Workflow approvals

Greater visibility of shared data

- Distribute item and contract data to your ERP and other systems
- Share item and contract data with your healthcare partners

GS1 and Scan4Safety compliant

- Supports GS1 standards and GDSN data
- GS1 compliant GTN validation
- Helps you meet you Scan4Safety requirements

Increased supplier collaboration

- Use as a portal to facilitate engagement and onboarding of suppliers
- Collaborate with suppliers to upload, maintain and validate item and contract data

Supports clean orders

- Use clean item data to create more clean orders
