DATA MANAGEMENT AND OPTIMISATION

Accurate data – the foundation for an efficient, resilient supply chain

Up-to-date and accurate data provides the foundation for the efficient and effective processes that healthcare providers need to maintain a robust and resilient supply chain.

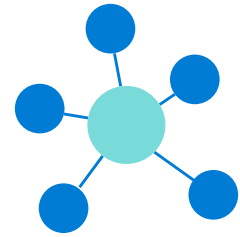

By managing and optimising the data held in your item master and systems, you can reduce order errors, saving your teams time on invoice queries and cutting the cost of returning incorrect items.

Clinical teams can be confident that they are receiving the right items, improving patient safety and supporting better compliance with GS1 standards. And having accurate, reliable data can help to make sure your business is prepared for any new system implementations.

Uniting the best of healthcare™

Enrich your data and enhance your supply chain processes

Our Data Management and Optimisation specialists can provide tailored resource and support to help ensure your data is clean, current and comprehensive, and help maximise the efficiency of your supply chain.

OUR SERVICES

Data cleansing and enrichment

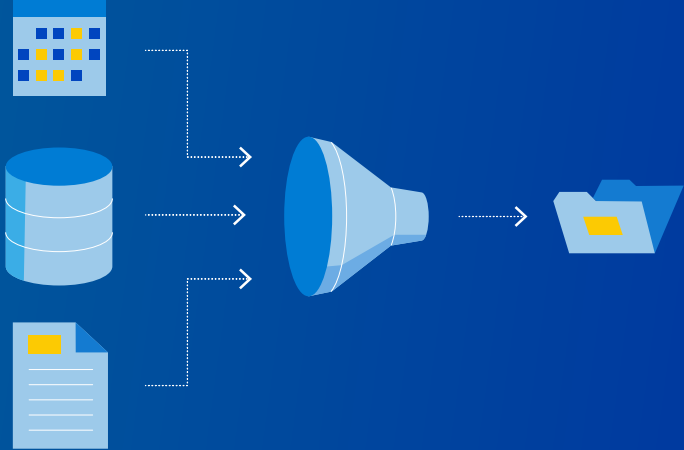

Corrects and updates your item data to provide supplier descriptions, including units of measure and quantities, from Europe's largest healthcare suppliers.

Adds GS1 compliant GTINs, item images and category coding to your dataset to enrich your data and enhance your purchase-to-pay processes.

Includes a comprehensive analysis of your existing item master data, matching to supplier data, cleansing, enrichment and validation with a delivery report on metrics achieved.

Data management and maintenance

Ongoing management of your data, including regular updates using the latest supplier information.

Find out how we can help you take your data quality to the next level and lay the foundation for optimised procurement in your organisation.
